Subject: the MS proposal:

the MS proposal:

putting more MS software in the schools does not address the original issues of contention - it only increases the monopoly.

i don't like the proposal. MS should be penalized, not given another foothold in another arena - this time against Apple.

take the money MS would have spent and divy it up to these poorer districts for computers and software of their choice.

let Apple, MS, and the Linux world each have a share of the pie.
